MAVIG X-Ray Protective Aprons

What makes them so special?

1- MAVIG aprons have the best X-Ray Protection possible

- Scattered radiation reduction at 80kV amounting to:
- 94% for material in Pb 0,25mm
- 97% for material in Pb 0,35mm
- 99% for material in Pb 0,50mm

2- MAVIG aprons combine Quality and Comfort

80 years of experience in researching considerably improved the quality and comfort of MAVIG aprons.

A broad-based range of aprons is proposed and expected from us as an international market leader.

- MAVIG aprons assure:*
- great wearing comfort due to the different models proposed to meet the different needs
 - special protection where the body is particularly sensitive to radiation (ie thyroid) and this perfectly adapted to the different apron models
 - elaborated and elastic binding systems to easily put on and take off the apron

3- MAVIG aprons use exclusive inner and outer Materials

NOVALITE, the innovation in X-ray protection material, combines the very latest requirements for safety and ergonomics - natural rubber and an absolute homogeneous dispersion of the X-ray absorbing material.

Novalite is a lead-composite material, not 100% lead free. Scattered radiation reduction is not only analysed at around 80kV, but also in lower tube voltages of 60-70kV. The experience and the knowledge of MAVIG guarantee the user

- high radiation absorption
- wide application field
- 30% less material weight than conventional aprons
- environmental compatibility
- no toxicly precarious substances.

COMFORTEX, the outer cover, was specially created and designed for MAVIG. A special coating guarantees hygienic requirements and demands of medical use, thus

- absolutely tear-proof tissue
- impermeability to infiltration
- conformity to Oeko-Tex-Standard 100

4- MAVIG aprons promise a reliable After-Sales Service

Not only the product-consulting service and information before ordering is self-evident for MAVIG, but we also attach great importance to be at the client's service after acquisition of our products.

As all our facilities are based in the same buildings, our after-sales-service is very well structured and efficient.

5- MAVIG Products are correctly certified

MAVIG X-Ray protection has successfully passed all design test and quality assurance processes and is CE-certified.

We thus guarantee that our products comply with the stipulations of European legislation (BöV, IEC, CE/PSA, CE/MPG, Certificates EN ISO 90001 and EN46001).
