

ReDUCE-ReUSE-ReCYCLE

Technologies used in order to collect, process and recycle scrap metals, paper and glass.

**Agios Antonios Primary School
Nicosia, Cyprus
School Year 2015-2016**

Discussing the issue of recycling and the need for reducing and reusing we observed that a lot of our schoolmates do not separate their waste...

Having that in mind we decided to organize some events in order to convince our friends at school about the need for recycling and make them rethink about the importance of proper waste management...

Sustain
the **Future.**

We made a short survey about the recycling process and the benefits to the environment...

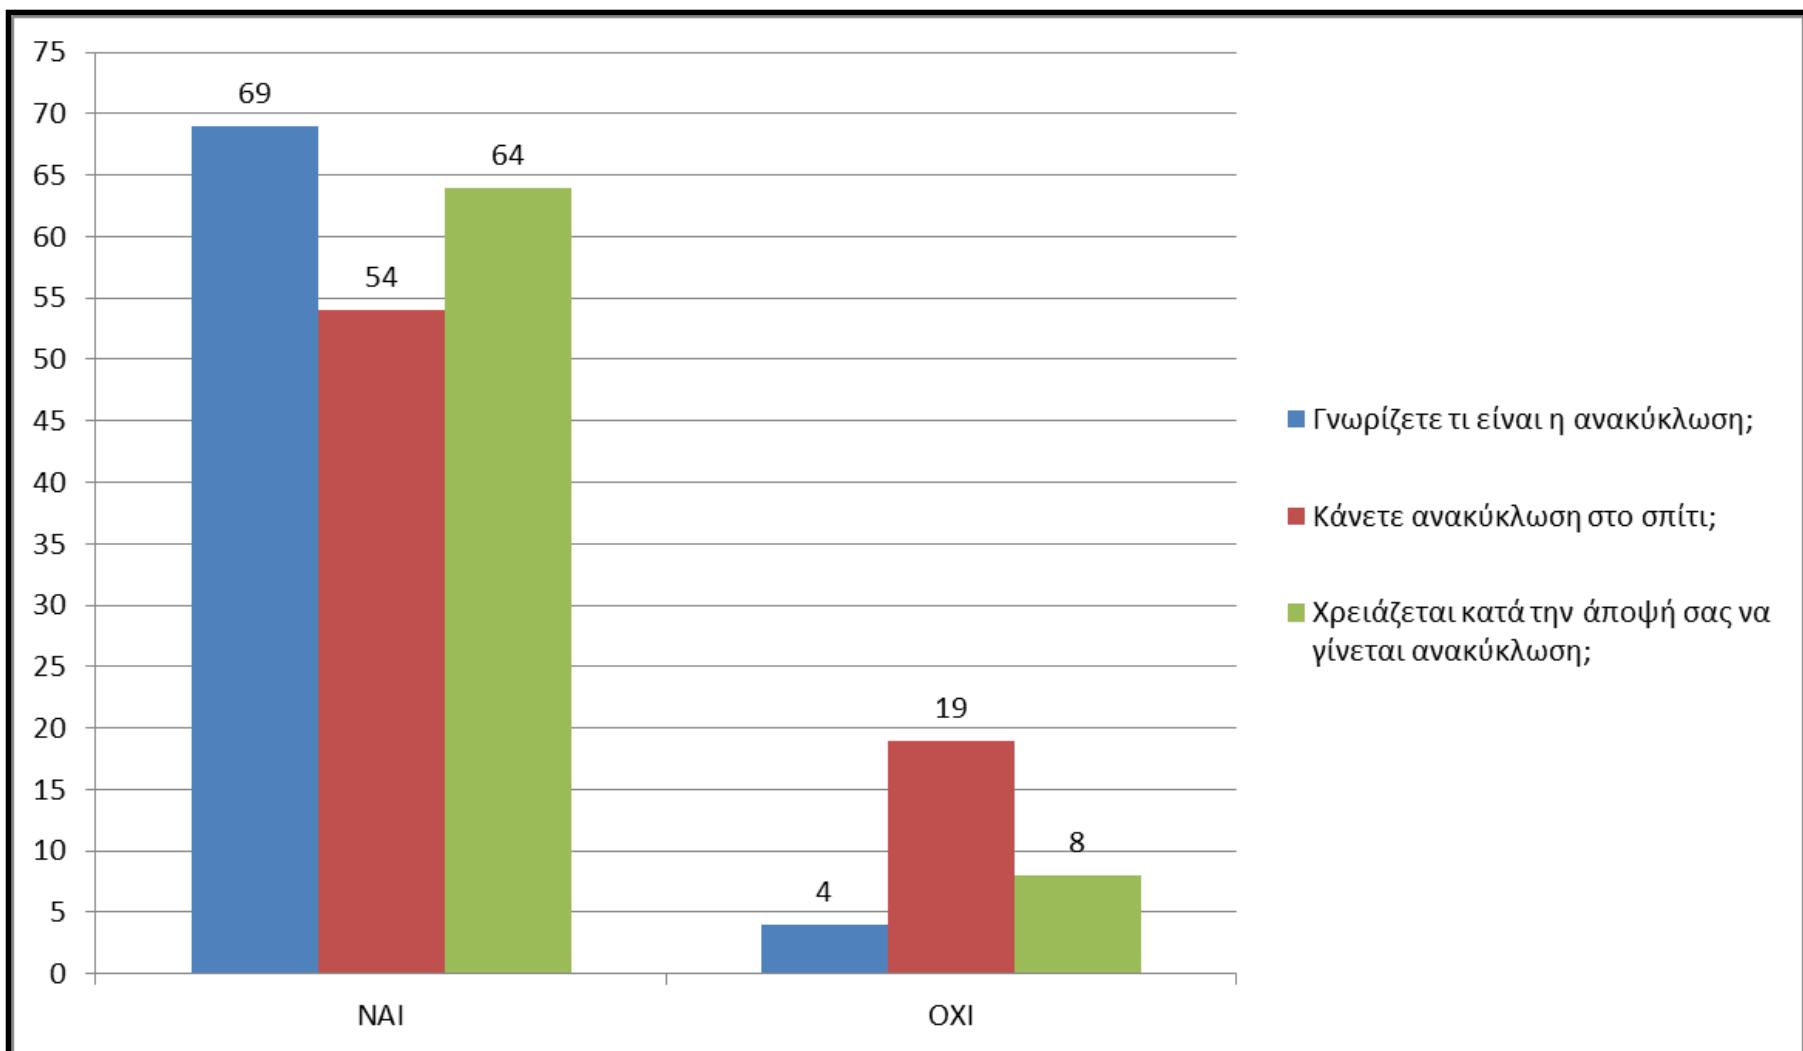

We produced and distributed a leaflet to children and teachers of our school informing them about the importance of recycling

We prepared and provided questionnaires to our schoolmates to find out how much they know about recycling and if they recycle...

Finding out that 95% of our schoolmates knows what is the process of recycling, 88% believes that we have to recycle and 3 out 4 (74%) supports that they do recycle at home.

We formed paper and glass recycling bins and handed them to every classroom...

We provided our school with recycling bins

We organized campaigns to collect recyclable plastic, aluminum...

paper...

...and students!

We visited a paper recycling plant...

...and a scrap metal recycle plant...

...where we hand out the aluminum we collected at school...

...watch the process of the recycling and the technologies used in order to collect, process and package the products for exporting...

...and found again our classmates!

And, finally, we asked from our schoolmates to form useful objects made of recyclable materials!

During the exhibition organized we presented the results of our survey and committed that we will work in order to transform our school into a sustainable one!

Closing our presentation we would like to share with you a short video with our memories from the wonderful trip we experienced the last days...

THANK YOU FOR YOUR ATTENTION!
